

Features of renewed "GSI Maps"

Screen design easy to use from mobile devices

Previously it was difficult to use GSI's extensive information and functions from mobile devices, but maps can now be used comfortably even from the small screens of mobile devices thanks to single-button arrangement of various layers of information and functions.

New screen design of "GSI Maps"

Current position display using GPS functions of smartphones

GSI arranges and maintains topographic maps with nationwide uniform standards. The online maps of GSI have been equipped with a function for jumping to the user's current position as located by smartphone. Provided that there is an Internet connection and power source in place, the local topography, addresses and elevation, etc. can be checked anywhere in Japan.

Select "Current position"

Display topographic around current position
